Mid-latency

- How much latency do you need to add to start seeing end-to-end defense?

Does it mix?

- Does low-latency traffic provide cover ("mix") with mid/high-latency traffic?

Website fingerprinting

- Do these attacks work against Tor?
- Does cell size change things?
- Does Tor's variable delay change things?
- What about a little bit of padding, e.g. long-range dummies?

Location diversity

- When many nodes are at a single ISP, and many paths are observable by a single ISP, what **local** algorithms can Alice use to improve (maximize?) her safety?

Helper nodes and reality

- What's the right way to do helper nodes in the presence of churn?

Fragmenting streams

- Should we fragment streams across multiple paths?

Congestion attacks

- Can you "measure" Alice by ICMP pings even if she doesn't relay traffic for you?

Incentives to relay

- Is it always unsafe to use your server for your anonymous traffic?

Pseudonyms/profiles

- Logging into your gmail account and then posting to Indymedia is bad.
- But a new circuit for every request is also bad.
- What's the right compromise/strategy?
